

Contractor Site Guidance – Sample Supporting Documents

The Contractor Site Guidance published on the Resources – Reports & Guidance pages of the CQIC website – refers to a number of documents which will be required in the management of quality on sites. The document stresses the importance of Inspection and Test Plans (ITPs). The contractors that collaborated in the development of the Contractor Site Guidance have shared a number of example ITPs in order to give an indication of the structure and content of these tools.

They have also provided samples of other useful documents such as Checklists and Quality Plan Structures for Sub-contractor Quality Plans. Links to these samples can be accessed from the links below:

[Design Responsibility Matrix](#)

[Sample Quality Plan](#)

[Concrete Foundations ITP](#)

The further sample documents are being completed and will be made available here once in their final form.
